

Worried about security of gas supply?

Are you a large local gas user?

Are you looking to diversify supply?

Are you interested in gas production directly at your site?

IGas Energy Plc is a Gas Exploration company with licenses to extract gas across the North West. We are producing gas near Warrington and have also received planning permission for a full production site in Ellesmere Port. We are looking to work with local intensive industrial gas consumers to develop production sites within their facilities, and supply them directly with gas to supplement

conventional supplies. In today's uncertain energy climate, together we can reduce risk! For more information please contact our agents King Sturge on **0161 236 8793** or us by email at **sites@igasplc.com**
